

ENVIRONMENTAL POLICY

Cleanforce has developed an Environmental Policy in line with our commitment to reducing the environmental impacts associated with our activities, products and services.

We continually improve our environmental practice by implementing the following:

- Continually seek to improve environmental performance and objectives
- Review our products and practices on a regular basis to ensure a high level of environmental responsibility and performance
- Minimising the environmental effect of new developments through strategic planning
- Working in partnership with our clients to adopt a sustainable approach to waste management
- Comply with all relevant environmental legislation and approved codes of practice
- Comply with the requirements of our clients' environmental management systems when requested
- Offer a full and comprehensive recycling service to our customers to assist or enable them to improve on their own environmental impact.
- Educate and encourage our customers to use the facilities we provide to assist them in disposing of their own waste in an environmentally aware manner.
- Educate and train all employees regarding their responsibilities in following good environmental practice.
- Encourage awareness and participation of good environmental practice by all the company's employees
- Work with our suppliers and contractors to promote good environmental practice in the use and disposal of materials used in the company's business

Our key environmental objectives are :

- Dispose of waste in a responsible manner.
- Recycle 100% of all green waste and paper waste produced within our own company environment.
- Recycling and reducing all other waste materials wherever possible.
- Wherever possible use biodegradable chemicals on all sites
- Use cleaning systems that reduce the use of chemicals on all sites
- Reduce water usage where appropriate and recycling water when possible
- Use advanced cleaning technologies
- Actively encourage the use of trigger sprays and use only 'ozone friendly' aerosols and recycled products
- Ensure that use of vehicles is reduced wherever possible

The above environmental objectives will be reviewed on an annual basis to ensure that they are relevant and continue to facilitate our environmental performance improvement
